Personal Projects

1. https://github.com/sodmod/grammercetamol

   This project is still in the development stage. I have implemented Email Service, Spring Security with just basic auth and JPA using Postgres as the database, I also implemented tokens that will be generated on signing up a user to confirm if the user email is correct or not. This project is still in the developing stage, I implemented Email Service and Jpa using Postgres. I implemented Spring Security using basic auth and later upgraded it to Jwt authentication

2. https://github.com/sodmod/Otp

   This project is built to send OTP to Users who need Otp in applications.

3. https://github.com/sodmod/JWT

   In this project, I implemented full spring security on signing up a new user and signing in as a user using JWT.

   I also implemented a refresh token to the application so that once the token is expired, the refresh token is used to create another access token

4. https://github.com/sodmod/Hibernate_Relationships

   In the project, I practice Spring data JPA

5. https://github.com/sodmod/My-_React_ToDo_List

   This is my react project

6. https://github.com/sodmod/FirstReactProject

7. https://sodiq-expenses.netlify.app/

   My react expenses practice project

8. https://badmus-todo-list.netlify.app/

   My React todo-list practice project
